## U.S. sees first beef herd expansion since 2007

Progressive Cattleman Editor David Cooper

The long awaited boost to U.S. cattle inventory and beef cow numbers finally arrived in 2014, as the number of beef cattle jumped 2.4 percent to 89,800,000 head. This marked just the second year-over-year increase in overall cattle numbers since 2007.

Beef cow numbers increased 2.1 percent nationally to 29.7 million head, for the first beef cow herd expansion since 2005.

Herd increases come at a critical time, as overall beef production in the U.S. dropped for the fourth-straight year, by 5.7 percent to 24.2 billion pounds – a drop of 1.5 billion pounds over the previous year.

Among U.S. states making a comeback in beef cow numbers, Texas and Oklahoma saw increases of 6.9 and 5.8 percent, respectively. They were joined by Kansas with a 4.5 percent beef cow increase, and Colorado with 4.9 percent. Wisconsin's beef cow population

jumped 10 percent. Nebraska, South Dakota, North Dakota were large beef states that saw decreases in beef cow numbers in 2014.

Regionally, the North and South states all saw increases in cattle on feed while the West saw its numbers drop in 2014 (based on Jan. 1 counts).

The lower supply of beef and cattle added more strength to prices in 2014 as the weighted average for fed cattle ended 2014 at \$164 per hundredweight (cwt). A stable run in corn prices between \$3.50 and \$4.50 per bushel helped feeders significantly through the entire year.

The CME index for feeder cattle climbed throughout 2014 and hovered around \$240 per cwt through the last quarter of the year, before dropping to \$220 in December. It's worth noting again that the CME index for feeders was around \$90 per cwt in early 2010.

Meanwhile the weekly choice cutout stayed above \$220 for most of 2014, including some record highs at the end of the grilling season.

### Global production

In spite of the 5.7 percent decrease in beef production, the U.S. continued its role as the largest producer of beef products, with 11.0 million metric tons of beef, or 18.7 percent of the total picture, followed by Brazil and the European Union, with 9.8 million and 7.4 million metric tons of beef. Brazil's production posted an increase in 2014, as did China, which went from 9.6 percent of world production to 11.6 percent.

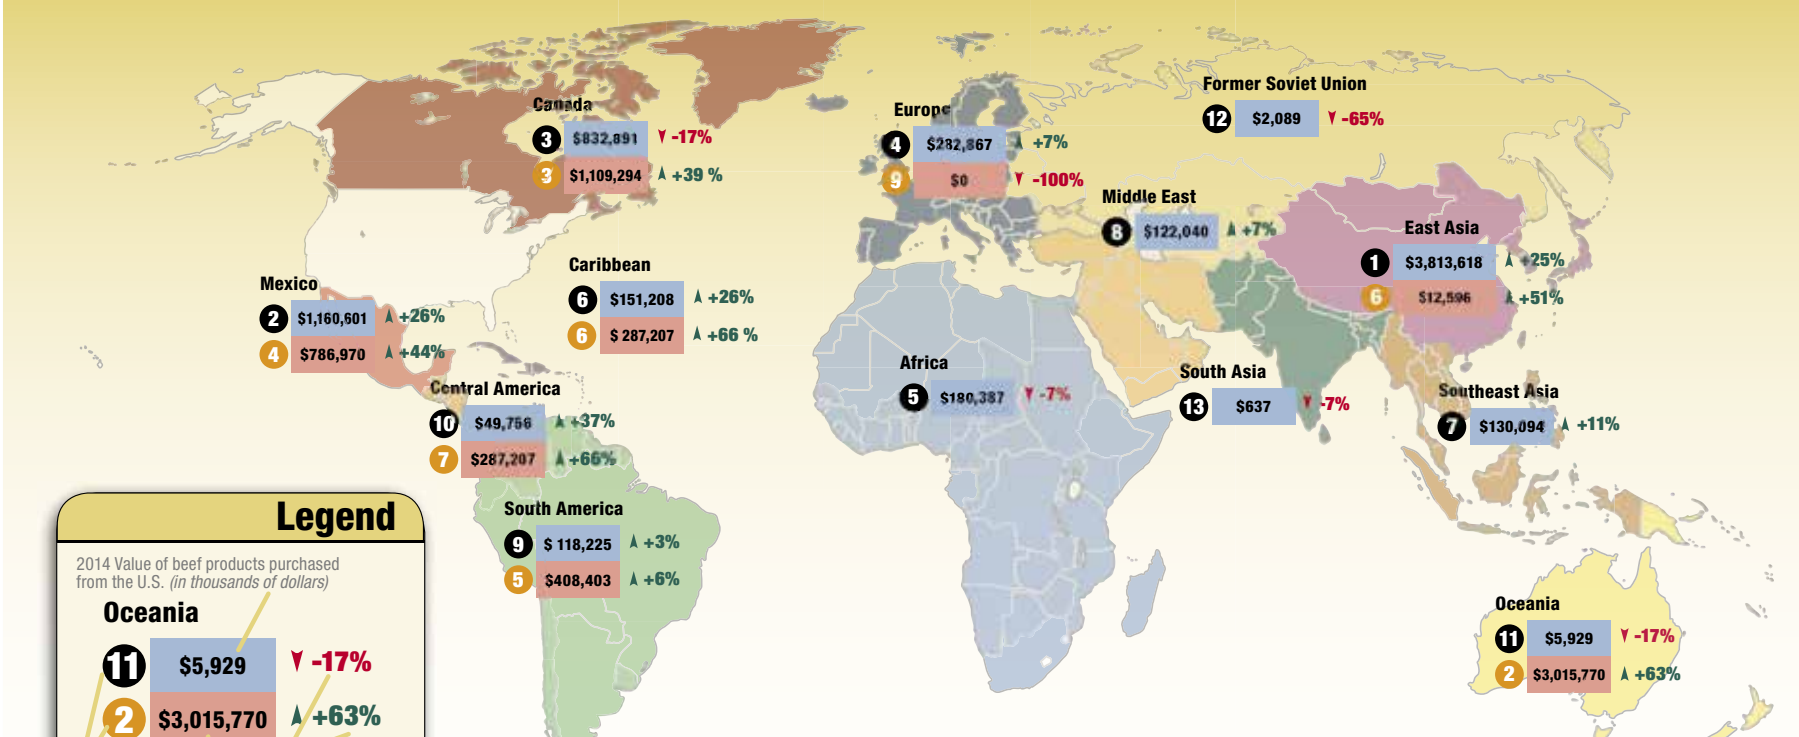

### U.S. beef trade

The value of U.S. beef and variety meats sent to trading partners jumped again in 2014, almost a full \$1 billion, from \$6.1 billion to \$7.0 billion, for an

increase of nearly 15 percent. Japan remained our biggest partner for trade value in 2014, spending just under \$1.6 billion on U.S. beef – an increase of 14 percent. Mexico and Canada also surpassed the billion-dollar mark for exports, with the former spending \$1.2 billion and Canada \$1.0 billion on American beef.

Mexico became the largest volume partner with the U.S., buying 242,566 metric tons of beef – a jump of 12 percent in volume. Hong Kong purchased 154,520 metric tons to become the third-largest volume buyer after Japan. Imports became critical to U.S. interests in 2014, as the volume of beef from Australia jumped 73.8 percent, followed by Canada, New Zealand and Mexico. The trade balance swung back in favor of imports by year's end as total volume moved closer to 100,000 metric tons.
