PROGRESSIVE DAIRY 2020 U.S. dairy statistics

How a pandemic influenced milk production

Progressive Dairy Editor Dave Natzke

In large part due to direct government financial assistance related to the COVID-19 pandemic and indemnity payments for those enrolled in risk management programs, U.S. dairy herd attrition slowed in 2020 while cow numbers and herd size grew.

U.S. milk production
U.S. milk production rose to 223.2 billion pounds in 2020, up nearly 4.8 billion pounds (2.2%) from 2019. It was the largest annual percentage and volume growth since 2013-14. Milk production has exceeded year-earlier totals in 22 of the last 25 years. (Only 2001 and 2009 were exceptions.)

Twenty-nine states registered annual milk production increases during 2020, up a combined 5.1 billion pounds. States posting the largest increases (volume basis) were Texas, California, Idaho, Colorado and South Dakota. On a percentage basis, largest increases were in Wyoming, South Dakota, Colorado, Texas and Indiana. Offsetting those gains, 19 states posted production decreases during 2020, with combined production falling just 323 million pounds compared with 2019.

Cow numbers
The U.S. cow herd averaged 9.388 million cows in 2020, up 51,000 head from 2019. That doesn't tell the whole story, however. U.S. cow numbers bottomed out in June 2020 before beginning a surge that lasted through the end of the year. By December 2020, U.S. cow numbers grew to 9.44 million head, the highest total since the second half of 1995.

Compared to a year earlier, the largest growth in cow numbers was in Texas (+30,000), Idaho (+20,000) and Colorado (+11,000). Thirteen states had more cows than the year before. Wisconsin remains the national leader in cow numbers, with 1.721 million head – followed by Wisconsin, with 1.259 million head.

Licensed herds
The annual average number of dairy farms commercially licensed to sell milk fell to 31,657 in 2020, a decline of 2,550 (about 7%) from the year before and down 21,475 (40%) since 2010.

U.S. dairy industry 15-year overview

Year	Total milk production (in millions of lbs)	Number of cows (in thousands)	Milk per cow (lbs per year)	Licensed dairy herds	Average herd size
2006	181,782	9,137	19,895	62,070	147
2007	185,654	9,189	20,204	59,130	155
2008	189,982	9,315	20,395	57,127	163
2009	189,334	9,203	20,573	54,942	168
2010	192,848	9,119	21,148	53,132	172
2011	196,164	9,194	21,336	51,291	179
2012	200,537	9,233	21,720	49,281	187
2013	201,231	9,224	21,816	46,975	196
2014	206,054	9,257	22,259	44,809	207
2015	208,597	9,314	22,396	43,534	214
2016	212,405	9,325	22,778	41,819	223
2017	215,466	9,392	22,941	40,219	234
2018	217,568	9,398	23,150	37,468	251
2019	218,441	9,337	23,395	34,207	273
2020	223,220	9,388	23,777	31,657	297

Dairy receipts as a % of state's total farm receipts

Milk per cow (lbs of milk)		Number of licensed herds		Dairy receipts as a % of state's total farm receipts	
Top 10		Top 10		Top 10	
Michigan	27,170	Wisconsin	7,110	Vermont	65%
Colorado	26,142	Pennsylvania	5,430	New York	54%
Idaho	25,180	New York	3,650	Wisconsin	51%
Wyoming	25,173	Minnesota	2,350	New Mexico	43%
Texas	24,926	Ohio	1,745	Idaho	35%
New Mexico	24,755	California	1,215	Pennsylvania	29%
Nebraska	24,746	Michigan	1,200	Michigan	27%
Nevada	24,677	Iowa	965	Utah	23%
Iowa	24,651	Indiana	805	New Hampshire	23%
Arizona	24,568	Missouri	720	Nevada	20%

herds were in New Mexico, which averaged 2,357 cows, a 29-cow jump from 2019. Texas posted the largest gain from a year earlier, up 166 cows to average 1,653 head.

The average size of Midwest herds topped 200 cows for the first time.

The Benefits of Sugar Blends

Sugars, provided in the form of molasses blends, can provide the following benefits:

- Better rumen health
- Reduced sorting
- Reduced shrink
- Improved fiber digestion
- Carrier for other ingredients
- Improved reproductive efficiency

DRMS

- ↑ INCREASES UNIFORM DISTRIBUTION
- ↑ INCREASES CONSISTENCY OF FEED
- ↓ DECREASES INACCURACIES

Why QLF?
Nutrients and additives in QLF products are distributed evenly throughout the product, into the TMR, along the feed bunk and into the cow. QLF products are an excellent method to deliver low inclusion additives like Rumensin®, Yeast Culture, Organic Trace Minerals, Amino Acids, Biotin, etc., so each animal receives their proper dose.

PROGRESSIVE DAIRY PODCAST

Our Progressive Dairy podcast episodes discuss what is happening in the industry and new and evolving management techniques. Just like our magazine, we'll cover a multitude of topics including human resources, business management, facilities, reproto and genetics, feed and nutrition, calf and heifer raising, dry and transition cows, herd health, hoof health, milk quality, animal welfare and manure handling.

Listen on our website at progressivedairy.com/podcasts or on one of these platforms:
